ROBOTICS, Inc.

Precision & Dependability Since 1971

Reduced Costs, Better Product, Higher Throughput

Robotics, Inc. provides high precision automation solutions to help you reduce your manufacturing costs by reducing:

- Expensive low value-added labor and related costs
- Repetitive stress injuries / Worker exposure to harmful chemicals
- Material waste / Inventory costs / Rejects
- Likelihood of recalls due to poor material application

Robotics, Inc. dispensing systems provide industry leading RESULTS. You end up with high quality products competitively priced. Our automated solutions enable you to achieve high production volume throughput.

If your production volume isn't high enough to justify equipment investment, we have the answer: **contract gasketing**. We use our own equipment at our facilities to dispense onto your parts. When your volume increases, your equipment purchasing decision will be easy because you'll know exactly the repeatability and precision of our systems. For more information, call us or see our Contract Gasketing Division at www.contractgasketing.com.

Common Dispensing Materials & Their Uses

Gasketing. Sealing. Adhesive assembly. Potting. These are some of your manufacturing processes that can be improved by automated dispensing.

USES

Form-In-Place
EMI/RFI Shielding
Thermally and/or Electrically Conductive

MATERIALS

Silicones	Anaerobics	Warm Melts
Epoxies	Cyanoacrylates	Others
Urethanes	Hot Melts	

Electronics Gasketing

Automating the manufacturing process is one of the best ways to pull costs out of your product. Automated gasketing and other dispensing processes are often critical requirements to achieve acceptable quality and precision.

Robotics, Inc. designs and manufactures standardized dispensing systems and custom automation solutions. A specialist in automated dispensing and Form-In-Place (FIP) gasketing, Robotics has built hundreds of systems located worldwide for highly precise and repeatable high-volume dispensing applications. Our capabilities include turnkey automation for the dispensing process--**everything you need**--including bulk material pumping, material conditioning, metering & mixing, robotic application, inspection, curing, part handling, and more.
